Excellent People. Excellent Clients. Excellent Results.

MARCH 2024

## Landscaping in March

We are now just under 30 days before kicking off the 2024 landscape season we have fired up the mowers and are working on activating irrigation systems. Our teams have been out applying Pre-Emergent to start the fight on weeds. With Punxsutawney Phil saying winter is going to be moving out early we wanted to make sure our properties are ahead of the game. However, if you still have some projects you would like to get done before the craziness starts please contact us. Our enhancement teams are ready to assist!

## Fun Facts

- \* March is the snowiest month of the year!
- \* March is a good time to plant spring-blooming bulbs like tulips and daffodils. They start to bloom in April and May!
- \* Have you heard about companion planting? planting basil near tomatoes can help repel certain pests.
- \* The first few insects to become active in the spring are honey bees, bumble bees, butterflies, ladybugs, ants, mosquitos and flies!

## Spring Awakening

Spring Forward and jump ahead are common terms for day light savings time. Sunday we will move our clocks 1 hour ahead. The terms “spring forward” and “fall back” are used to describe a practice of changing standard time with the intention of “saving” (as in, making better use of) natural light. During daylight savings time (DST), clocks are turned ahead one hour, so that the sun rises later in the morning and sets later in the evening. Are you ready to spring forward???
